Objective

Data Engineer with expertise in designing, implementing, and developing scalable data solutions. Experienced in working with data warehouses, data lakes, distributed systems, and big data processing. Skilled in deploying ETL pipelines, solving performance issues, and collaborating on fast-paced, growth-driven projects. Strong background in technical architecture and application architecture with a focus on leveraging AWS for infrastructure solutions.

Education

Master of Science in Computer Science

University of South Dakota, SD

Jan 2024 - Dec 2025

Bachelor of Technology in Computer Science

Jawaharlal Nehru Technological University, Hyderabad, India

Jun 2019 - May 2023

Relevant Coursework: Distributed Systems, Data Warehousing, Technical Architecture, Big Data, Data Processing, Data Visualization, ETL Development, Machine Learning

Experience

Futureense Technologies, Bengaluru, India

Data Specialist Intern

May 2023 – Aug 2023

- Designed and deployed scalable ETL pipelines for efficient Data Warehouse operations and processing, and implemented data lake solutions to address growing data needs. Utilized AWS services such as EC2, S3, and Lambda for data processing and cloud infrastructure, contributing to fast-paced deployments and enhanced analytics.
- Collaborated with engineers and stakeholders to solve infrastructure issues, ensure performance tuning of large datasets, and improve data processing speed by 30
- Integrated data visualization solutions for communicating key metrics to stakeholders using Tableau and AWS QuickSight. Developed solutions for processing unstructured data with NoSQL and JSON formats.

University of South Dakota, SD

Graduate Research Assistant

Jan 2024 – Apr 2024

- Contributed to the design and implementation of scalable data lakes and data warehouses for scientific research data storage. Developed ETL scripts using Python and Scala for high-performance data ingestion, transformation, and schema optimization.
- Enhanced database performance by implementing schema optimizations and troubleshooting issues in data pipelines. Solved technical issues in data visualization software, ensuring stakeholders had access to key research metrics.
- Collaborated on writing technical reports and research papers related to data solutions and distributed systems architecture, addressing technical challenges and contributing to the development of effective data infrastructures.

Technical Skills

- **Languages:** Python, SQL, Scala, KornShell, JavaScript, BASIC, JSON
- **Technologies:** Apache Spark, Hadoop, AWS (EC2, S3, Lambda), Apache Ignite, NoSQL
- **Data Tools:** MySQL, SQL Server, Data Lake, Data Warehousing, ETL, Data Processing, Scripting
- **Visualization:** Tableau, Power BI, AWS QuickSight, Data Visualization Software
- **Skills:** Data Processing, Technical Architecture, Application Architecture, Deployment, Development, Growth, Infrastructure, Problem Solving, Troubleshooting, Tuning, Work Collaboratively, Writing

Projects

Emergency Patient Care System

May 2023 – Aug 2023

- Designed and implemented a distributed system for real-time patient data management using NoSQL and AWS. Developed and deployed ETL pipelines to support real-time data ingestion from various healthcare devices, enhancing scalability and processing efficiency.
- Implemented AWS Lambda to automate data processing, improving the scalability of the application architecture and real-time data management capabilities.

Data Pipeline for Product Predictions

Sep 2023 – Jan 2024

- Built a scalable data pipeline to process large datasets for predictive analytics, leveraging Hadoop and Spark for big data processing.
- Developed ETL processes to support data lake architecture and improved data storage efficiency by 25%.

Apache Ignite Storage Project

Feb 2024 – Apr 2024

- Developed a high-performance distributed storage solution using Apache Ignite, focused on solving issues related to data scalability and performance.
- Optimized database design, implementing schema improvements and performance tuning for large-scale data processing.

Certifications

- AWS Certified Solutions Architect - AWS
- Data Engineering with Google Cloud -Coursera
- Advanced Python Programming -IBM
